Project description

In the municipality of Pljevlja during the construction of wastewater treatment and sewerage network in the amount of € 7.1 million (6 million aza WWTP and € 1.1 million for sewer network). Funding for the project was secured and is being built. As a segment that has an impact on this project, there is a need to regulate the Cehotina river bed (to ensure preventive measure and flood protection), the subject of the main project, but there are no funds for this purpose (4.14 million).

Project goal

The aim of the project is to build a system for waste water treatment and sewage networks in Pljevlja as per the criteria of EU Directive 271/91/EEC, and to ensure preventive measure and flood protection. In this way, we can protect the Cehotina river and other rivers in the Danube Basin.

Beneficiaries and target groups

The direct beneficiaries of the project are the (30000) residents of the Pljevlja municipality. The Cehotina flows into the Drina through BiH and into Sava, and will benefit residents of these areas.

Constraints and risk appraisal

Without this grant, the project cannot be realized. Also important is the implementation of good coordination between project participants (municipalities, public companies, financial institutions) and quality documentation.
