

The harsh reality of Earth's limited natural resources and irreparable damage already done to many ecosystems, have necessitated the need for a global response. The development of Sustainable Development Goals and the introduction of Carrying Capacity as future development policy frameworks, has brought a lot of responsibility to all levels of governance, right down to both local and regional level. The main challenge now, is to design and implement development policies, which will reconcile the sustainability and economic prosperity of regions, to attract individuals, business, enable a safe, healthy and prosperous environment to live and work in.

Novel approaches to management of local and regional ecosystem potentials will have to be adopted, increasing demand for individualization calls for more participatory development planning, because the globalized world is pressuring for more and more technical and social innovation. What are the tools, approaches, success stories to make this happen, what do they have in common and are they universally transferable?

Join us at the Conference

ATTRACTIVE REGION VS. SUSTAINABLE REGION with subtitle **Can sustainability be an attractive development objective for regions in the future?**

Date: **28. 5. 2019** Final conference
29. 5. 2019 Guided tour in Postojna cave
Venue: **Hotel Jama in the Postojna Cave Park**

At the conference you will be able to hear about ideas, contemplations and approaches already tested, from decisionmakers, experts, entrepreneurs and experts in different fields and you are also invited to participate in interactive and moderated exercises, aimed at participatory planning.
